No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            eeq

ი

The invention relates to to a cell-free protein synthesis system derived from wheatgerm where there is substantial exclusion of wheatgerm embryo albumen impurities. The novel system uses a sequence having a higher-order RNA structure that promotes translation activity. The higher-order sequence is preferably a "pseudoknot", especially derived from a range of

a range of

Cell-free protein synthesis means in wheatgerm system to establish overexpression of target gene with base sequence sustaining translation activity and function promotion, for producing useful proteins.

                             The invention comprises seven RNA sequences (CrPV-like viruses) which have a higher-order structure that sustains translational activity-promoting function. The RNA sequences of the invention are useful in the synthesis of proteins and polypeptides for application in developing and producing drugs. The RNA sequences of the invention are also useful in basic research of protein synthesis and structural analysis by the gene
                                                                                                                                                                                                                                                                                  Translational activity-promoting higher-order structure of CrPV-like viruses for protein translation when suitably initiated, useful in synthesis of proteins and polypeptides of foreign species for applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CrPV-like virus; 88; higher-order structure; drug development; drug production; translational activity-promoting function; protein synthesis; structural analysis

                                        The invention relates to to a cell-free protein synthesis system derived from wheatgerm where there is substantial exclusion of wheatgerm embryo albumen impurities. The novel system uses a sequence having a higher-order RNA structure that promotes translation activity. The higher-order sequence is preferably a "pseudoknot", especially derived from a range of viruses (ABZ80707-ABZ80713). This sequence represents the "pseudoknot" higher-order sequence from the Drosophila C virus. The sequence is used in a construct which may also include an intergenic region and internal ribosome entry site (IGR-IRES). The method is applicable in producing
                                                                                                                                                                                                                                                                                                                                              Cell-free protein synthesis means in wheatgerm system to establish overexpression of target gene with base sequence sustaining translactivity and function promotion, for producing useful proteins.

                                                                                                                            The invention comprises seven RNA sequences (CrPV-like viruses) which have a higher-order structure that sustains translational activity-promoting function. The RNA sequences of the invention are useful in the synthesis of proteins and polypeptides for application in developing and producing drugs. The RNA sequences of the invention are also useful in basic research of protein synthesis and structural analysis by the gene recombinant technique. The present nucleotide represents a Drosophila C virus RNA sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Translational activity-promoting higher-order structure of CrPV-like viruses for protein translation when suitably initiated, useful in synthesis of proteins and polypeptides of foreign species for application
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CrPV-like virus; ss; higher-order structure; drug development;

                                                                                The invention relates to to a cell-free protein synthesis system derived from wheatgerm where there is substantial exclusion of wheatgerm embryo albumen impurities. The novel system uses a sequence having a higher-order RNA structure that promotes translation activity. The higher-order sequence is preferably a "pseudoknot", especially derived from a range of viruses (ABZ80707-ABZ80713). This sequence represents the "pseudoknot" higher-order sequence is black queen-cell virus. The sequence is used in a construct which may also include an intergenic region and internal ribosome entry site (IGR-IRES). The method is applicable in
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cell-free protein synthesis means in wheatgerm system to establish overexpression of target gene with base sequence sustaining translativity and function promotion, for producing useful proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pseudoknot; secondary structure; cell-free albumen; impurity; higher-order structure; internal ribosome entry site; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                             The invention comprises seven RNA sequences (CrPV-like viruses) which have a higher-order structure that sustains translational activity-promoting function. The RNA sequences of the invention are useful in the synthesis of proteins and polypeptides for application in developing and producing drugs. The RNA sequences of the invention are also useful in basic research of protein synthesis and structural analysis by the gene recombinant technique. The present nucleotide represents a Black queencell virus RNA sequence of the invention. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Translational activity-promoting higher-order structure of CrPV-like viruses for protein translation when suitably initiated, useful in synthesis of proteins and polypeptides of foreign species for application
                                                                                                                                                                                                               Sequence

                                                                  Matches
                                                                                                 Query Match
                                                                                                                                                                          The invention relates to to a cell-free protein synthesis system derived from wheatgerm where there is substantial exclusion of wheatgerm embryo albumen impurities. The novel system uses a sequence having a higher-order RNA structure that promotes translation activity. The higher-order sequence is preferably a "pseudoknot", especially derived from a range of viruses (ABZ80707-ABZ80713). This sequence represents the "pseudoknot" higher-order sequence from the himetobi P virus. The sequence is used in a construct which may also include an intergenic region and internal ribosome entry site (IGR-IRES). The method is applicable in producing
                                                                                                                                                                                                                                                                                                                                                                           Cell-free protein synthesis means in wheatgerm system to establish overexpression of target gene with base sequence sustaining translation activity and function promotion, for producing useful proteins.

                                                                                                                                                                                                                                                                      The invention comprises seven RNA sequences (CrPV-like viruses) which have a higher-order structure that sustains translational activity-promoting function. The RNA sequences of the invention are useful in the synthesis of proteins and polypeptides for application in developing and producing drugs. The RNA sequences of the invention are also useful in basic research of protein synthesis and structural analysis by the gene recombinant technique. The present nucleotide represents a Himetobi P virus RNA sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Translational activity-promoting higher-order structure of CrPV-like viruses for protein translation when suitably initiated, useful in synthesis of proteins and polypeptides of foreign species for application

```

CC DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where CC differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the CC expression of at least one gene in Gs; (2) screening (M3) for an agent tissue, an altergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression CC pathogen or sterile inflammatory disease using the gene expression CC pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of subject to a pathogen or sterile inflammatory disease, by detecting the level of cf expression of the gene is indicative of inflammation; (4) treating CC response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile (CC response in a subject, exposure of a subject to a pathogen or sterile (CC response in a subject, exposure of a subject to a pathogen or sterile (CC response in a subject, exposure of a subject to a pathogen or sterile (CC response in a tissue, an allergic response in a tissue, an allergic response in a subject to a pathogen or sterile (CC response) in a tissue, an allergic response in a subject (e.g. cexposure of a subject to a pathogen or sterile inflammation (a) treation (cc exposure of a subject to a pathogen or sterile inflammation (a) treation (cc exposure of a subject of modulating GCA preferably in an (cc inflammation in a tissue, an allergic response in a subject, (cc exposure of a subject to a pathogen or sterile inflammation (e.g. cc psocially chronic) in a tissue, an allergic response in a subject, (cc exposure of a subject to a pathogen or sterile inflammation (e.g. cc psocially chronic) in a tissue, an allergic response in a subject, (cc exposure of a subject to a pathogen or sterile infla The invention relates to detecting (M1) granulocyte (GC) (GCA), by detecting the level of expression of gene(s) (infection, viral infection, parasitic infection, protozoal infection, fungal infection and M5 is useful for treating one of the above (Gs) identified activation λÂ

     The invention relates to an isolated polynucleotide comprising any one of 30043 cDNA sequences, appearing as Aciti2789-Aciti50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding the reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide
                                                                                                                                                                         New polynucleotide sequences obtained as hybridization probes, as oligomers mapping, in the recombinant production
                                                                                                                                       Claim 1;
                                                                                                                                                                                                                              WPI; 2003-615964/58.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      expressed in granulocytes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequences are also useful as hybridisation probes, as oligomers for PCR, for Chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence so one of the 38043 isolated CDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at

CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cotivity, and can be used in gene therapy and vaccine production. (I) corrections and polynucleotides may be used in the prevention, diagnossis and creatisms and polynucleotides may be used in the prevention. Grant treatment of diseases associated with inappropriate (I) expression. For considering the production of compression by rectifying mutations or deletions in a patient's genome concentrated the activity of (I) by expressing inactive proteins or to concentrate affect the patients own production of (I). Additionally, (I) concentrated with expressing the concentrate acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, concers and cancer metastases of haematopoietic decides, especially concers and cancer metastases of haematopoietic antigen genomic concers from the present invention. AAK54942 to AAK54950 and AAM82169 corpresent sequences used in the exemplification of the present invention.

                                                                                                                                                밁
                                                                                                                                                                              र्
                                                                                                                                                                                                                                                                                                                                  AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) camino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) correctins and polynuclectides may be used in the prevention, diagnosis and ctreatment of diseases associated with inappropriate (I) expression. For cexample, they may be used to treat disorders associated with decreased correction by rectifying mutations or deletions in a patient's genome contract affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) colynuclectides may be used to produce the secreted (I), by inserting the colynuclectian into a host cell and culturing the cell to express the correctin. (I) proteins and polynuclectides may be used to prevent, cancers and treat immune/haematopoietic-related diseases, especially concers and cancer metastases of haematopoietic antigen genomic concers and cancer metastases of haematopoietic antigen genomic concers from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated cancer associated nucleic acids comprising at least 10 contiguous nucleotides, useful for diagnosing, preventing and/or trocancers such as leukemia and lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 84476 BP; 22346 A; 17371 C; 17200 G; 27559 T; 0 U; 0 Other;

ALPV RNA is useful for controlling homopterous insects such as aphids or white flies. It is useful in the research concerning aphids and for controlling aphids and for controlling aphids and for detecting aphids and for preparing a monoclonal antibody against antigen which is synthesised for preparing a monoclonal antibody against antigen which is synthesised in virto. The invention is also useful in gene therapy. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel nucleic acid derived from aphid lethal paralysis virus, useful detecting ALPV-viruses, for preparing a monoclonal antibody against antigen, in research concerning aphids and for controlling aphids.

CC The present invention relates to chemically modified DNA sequences of cc signal transduction associated genes. The DNA sequences are chemically cc modified using a solution of bisulphite, hydrogen sulphite or disulphite. CA Also disclosed are oligonucleotides and/or PNA oligomers for detecting the cytosine methylation state (CpG islands) of these genes, and a method cc for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with signal transduction. The genomic DNA can be cc obtained from cells or cellular components which contain DNA, e.g. cell clines, bioppies, blood, sputum, stool, urine, cerebral-spinal fluid, cc tissue embedded in paraffin such as tissue from eyes, intestine, kidney, can be can all their possible combinations. The sequences of the invention are cuseful for the diagnosis and therapy of diseases associated with signal cr transduction e.g. solid tumours and cancer. ABK31154 represent chemically pretreated genomic DNA sequences of the printed security sequence date for this patent did not form part of the printed cc sequence date for this patent did not form part of the printed sequence con the contain but was obtained in electronic format directly from the contains a patent office.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note="Organ: Roots; Vector: pBluescript II SK (+) XR; Site 1: EcoRI (5' end of cDNA); Site 2: XhoI (3' end of cDNA); mRNA was isolated from each tissue source independently and equal quantities of mRNA from each tissue were then pooled. cDNA was prepared from 5 micrograms of mRNA and directionally ligated into the pBluescript II SK (+) XR vector using the pBluescript II SK (+) XR vector using the pBluescript II SK (-) XR vector using the pBluescript II SK (-) DRA Library Construction Kit according to manufacturer's instructions with modifications (Stratagene). Plasmid DNA was then transformed by electroporation into DH10B cells (Invitrogen) for propagation. Normalization was applied according to published methods [Bonaldo M.F. et al. (1996) Genome Research 6(9):791] in order to reduce the abundance of highly expressed transcripts."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-09-949-016-56332; Sequence 56332, Application US/09949016; Patent No. 6812339
                                                                                                                                                                                                                                                                                                          PATENT NO. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 60/241,755
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR APPLICATION NUMBER: 60/227,768
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-10-03
